How to enable/disable Yubikey 2FA (Two-factor Authentication) in Ezeelogin?

Overview: This article provides a comprehensive guide on configuring and managing Yubikey two-factor authentication (2FA) for SSH jump host.

Refer to the YouTube video to [Configure Yubikey's two-factor authentication](#) in ssh jump host.

1. How to enable Yubikey?

Step 1(A): Log in to the Ezeelogin GUI as an admin privileged user, navigate to **Settings -> General -> Two Factor Authentication**, and enable Yubikey.

Ezeelogin Welcome, Administrator Logout

General Settings Authentication **Two Factor Authentication** Security Defaults Miscellaneous

Enable Google Authenticator ☐

Enable Duo ☐

Enable Radius ☐

Yubico Client ID [Get Yubico API Key](#)

YubiKey Sync Level 0

DUO Secret key

Allow Reuse Of Google Authenticator Code ☐

Skip Two Factor Authentication For SAML ☐

Enable Yubikey ☒

Enable FIDO2 ☐

Enable Access Keyword ☐

Force Two Factor Authentication ☐

Yubico Secret Key

DUO Integration key

DUO API hostname

Use Email ID for Duo login ☐

Cancel Save

Step 1(B): Click on "Get Yubico API Key" to obtain the Yubico Client ID and secret key.

Ezeelogin Welcome, Administrator Logout

General Settings Authentication **Two Factor Authentication** Security Defaults Miscellaneous

Enable Google Authenticator ☐

Enable Duo ☐

Enable Radius ☐

Yubico Client ID [Get Yubico API Key](#)

YubiKey Sync Level 0

Step 1(D): Log in to the Ezeelogin GUI using the Yubikey 2FA method.

YubiKey verification

Insert your YubiKey into a USB port and touch the YubiKey button

YubiKey

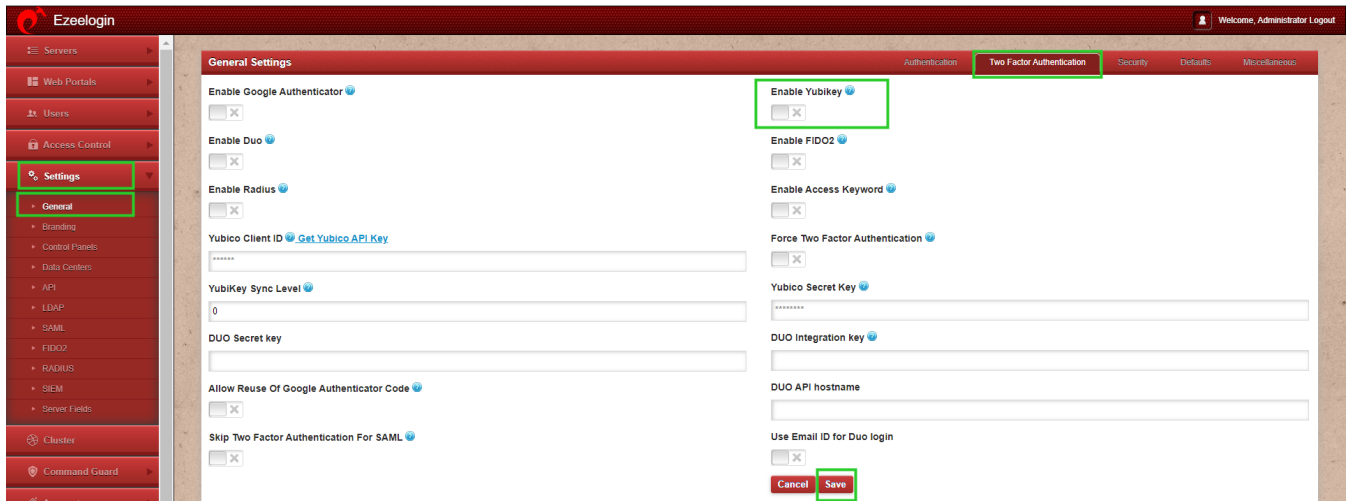

Verify

Step 1(E): The backend 2fa method will also be now using Yubikey.

```
Enter YubiKey: 
```

2. Disable Yubikey 2FA from the GUI.

Step 2(A): To disable Yubikey from Ezeelogin GUI, navigate to **Settings -> General -> Two-factor Authentication** and [disable Yubikey](#).

Emergency CLI Method:

1. How do we disable Yubikey 2FA (Two-factor Authentication) from the backend?

Run the below commands to [disable and clear Google authenticator](#). Replace the username to disable Yubikey for that user.

```
root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_settings set value='N'
where(name='enable_yubikey')"
```

```
root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_users set eyk=NULL
where username='ezadmin'"
```

No Two-factor Authentication enabled

2. This error happens when we enforce Two-Factor authentication without enabling any of the Two-Factor authentications. Run the following command to disable **Force Two Factor Authentication**.

```
root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_settings SET value = 0
WHERE name = 'two_factor_auth'"
```

```
root@gateway:~# php /usr/local/ezlogin/ez_queryrunner.php "update prefix_usergroups SET
```

```
force_tfa = 'N'
```

Yubikey outbound URLs to be whitelisted:

Following are the Yubikey outbound URLs to be whitelisted in the firewall.

1. <https://api.yubico.com/wsapi/2.0/verify>
2. <https://api2.yubico.com/wsapi/2.0/verify>
3. <https://api3.yubico.com/wsapi/2.0/verify>
4. <https://api4.yubico.com/wsapi/2.0/verify>
5. <https://api5.yubico.com/wsapi/2.0/verify>

Yubikey Library requires access to the above URLs. Also, do check out the article for the list of YubiKey API servers that the YubiKey client would utilize https://developers.yubico.com/yubikey-val/Getting_Started_Writing_Clients.html
