

Login as superadmin when SSO is enabled globally

753 Jisna Joseph November 22, 2024 [Features & Functionalities](#) 377

How to login as superadmin user when SSO is enabled?

Overview: This article helps superadmin user (user account created at the time of installation) to login to GUI while using SSO.

METHOD 1

Step 1: Add the superadmin user(user account created at the time of installation) in Ezeelogin to [SSO](#) with the exact username and Email address as used in Ezeelogin.

Ensure that the superadmin user's email address in Ezeelogin matches the email used in SSO, as Ezeelogin uses email for user verification by default.

Step 2: Once the superadmin user has been added to SSO with the exact username and email address, they should be able to log in using [SSO](#).

METHOD 2

This is an alternative method where you can log in without [SAML authentication](#). We are not disabling the SAML here, instead users can login without SAML authentication with the provided url.

Step 1: Navigate to **Settings -> SAML -> Advanced option -> Enable Allow Internal Authentication**.

SAML Service Provider (SP) Info

Metadata URL	https://cloudweg.com/ezelogin/index.php/metadata
Entity ID	https://cloudweg.com/ezelogin/
Assertion Consumer Service URL	https://cloudweg.com/ezelogin/index.php/auth/acs
Single Logout Service URL	https://cloudweg.com/ezelogin/index.php/auth/slo

Allow Internal Authentication
Internal Auth URL: https://cloudweg.com/ezelogin/index.php/auth/login/1

Step 2: After enabling **Allow Internal Authentication**, you will receive an internal auth URL from which you can log in without SAML authentication for Ezeelogin users.
