

How to move servers/migrate servers from one Ezeelogin installation to another?

81 admin July 3, 2024 [Migration & Maintenance](#) 5294

Step-by-Step Guide to Migrate Ezeelogin Installation to Another Server

Migrating your Ezeelogin installation to a new server involves several systematic steps to ensure a smooth transition.

Here's how you can do it:

Step 1: Export Servers using ezxport Utility

- Access the old Ezeelogin gateway server.
- Run the following command in the Ezeelogin gateway server (old server):
- Replace servers.csv with your desired output file name.

For Reference: [How to export servers in CSV format](#).

```
:~# php /usr/local/ezlogin/ezxport.php servers.csv
```

2. Import that output file to new Ezeelogin.

Add the servergroup to the new server before import the servers

https://www.ezeelogin.com/user_manual/ImportingServers.html

3. Check whether you are able to login to imported servers.

4. If everything is fine, you can delete servers from old Ezeelogin.
