

key_read: uudecode ssh user cant login with ssh key

83 admin April 4, 2018 [Common Errors & Troubleshooting](#) 13528

User can't log in with their SSH key and I'm getting this error in /var/log/secure

Make sure that your public key is not corrupted. Try generating a new public key and paste it in the backend.

Refer the following article to update the ssh gateway users public key.

https://www.ezeelogin.com/user_manual/SSHauthenticationkey.html

Alternatively, you can update the public key by sshing into the gateway server and paste the public key in **/home/user/.ssh/authorized_keys**
