

# Unable to open ssh session

93 admin July 11, 2017 [Common Errors & Troubleshooting](#) 6343

I get the error "Unable to open session" while trying to ssh?

1. Ensure that selinux is disabled the remote / target host.
2. Ensure that selinux is disable on the ssh gateway box as well.

You may set selinux to disabled in **/etc/selinux/config**.

The command **sestatus** should return '**disabled**' as the result.

if this is still unresolved, check for error messages in `/var/log/secure` , `/var/log/messages`, `/var/log/audit/audit.log`  
Check for errors in `/home/username/ezsh.log` on ssh jumphost.
